

Health Footprint  
of Pandemic

# Scenario planning for the year ahead...

## Social distancing

How can we deliver a service in a way that allows social distancing?

A

## Future waves

How do we plan for a second or third wave of the pandemic?

C

## Health impact

How do we plan for the impact of interrupted care for those with long-term conditions?

E

B

D

## Digital

How do we plan for virtual by default? How do we support staff and service users to utilise digital interaction where possible? When, and how, do we use face-to-face interaction?

## Demand

How do we plan for an increase in demand for services as restrictions ease?

Scenario	Social distancing continues for several months	Digital by default	There is a second and third outbreak of covid-19	Increased demand for services as restrictions ease	Effects of interrupting care for those with long-term conditions
How might this affect our service?					
What can we do now to enhance our resilience and mitigate the impact?					
What contingency measures might we have available to us?		ie. How can we do use face-to-face safely?			
Trigger point (what would trigger us to put in place these contingencies?)		ie. When would we need to use face-to-face?
