161904	Improving outcomes and experience for people with progressive MS on an unplanned admission to hospital.	By May 2025 we aim to have 50% reduction in reported poor outcomes and experiences from people with progressive MS on an unplanned admission to hospital, and a 25% increase in positive experience reports. We aim to collaborate with people with MS, key stakeholders and acute hospital staff to find out how we can support our MS patients and the staff looking after them better on an unplanned admission to hospital. In collaboration with people with MS and other key stakeholders, we have designed a simple Pathway to help ward staff to identify risks and take actions to prevent deterioration and facilitate safe and timely discharge from hospital. The Pathways is designed to be supported by 'Link Nurse' roles on medical wards where people with MS are likely to be admitted. If adopted, it comes with regular, short training sessions provided by the CNS in MS, and the Link Nurses will a direct link with the CNS in MS Nurse to support them in championing use of the Pathway. The aim of the project is to reduce hospital length of stay, improve the experience, and promote safe and timely discharge home with optimal independence for the person with progressive MS.
